WHY WOMBOOTA BORDER LEICESTERS

HISTORY -

Our family has breeding some of the best Border Leicesters in Australia for 110 years.

WE USE OUR OWN -

We benefit from superior stud genetics in our own prime lamb operations.

PROVEN PROFIT -

We are proud of our clients' continued success with phenomenal sales of Womboota Border Leicesters progeny.

- Rams will be penned from 11.00am on the day of the sale.
- Full Lambplan ASBV's available on each ram.
- We are using Auctions Plus if you are unable to make it on sale day. We have photographed all of the lots so that you can see in detail what you are bidding on.
- Complementary delivery arrangements to all successful purchasers will be made where possible
- All breeding sheep at Womboota Pastoral have been Gudair vaccinated since 2004.
- Rams carry an Australian Health Score of 8 out of a possible 10 points under the previous ABC scheme.
- Womboota Border Leicester Stud is registered with the Australian Stud Sheep Breeders Association
- Womboota Border Leicester Stud is Accredited Brucellosis free.
- Womboota Pastoral is located within a footrot protected area, and in the Riverina bio security area.
- Stud ewes will be available for private selection on property from mid October.
- Light refreshments available on the day of the sale.

We look forward to seeing you at our sale.
Regards, the Starritt Family, Womboota

www.superborders.com

SuperBorders is the brand name for Border Leicester Rams that are of high genetic merit for a first cross production system. The official SuperBorder yellow ear tags allow SuperBorder rams to be easily identified.

To qualify as a SuperBorder a Border Leicester ram must be above the 50th percentile for the breed based on the BLX index (Border Leicester Cross Index). The 50th percentile index value is calculated based on the 15th of August LAMBPLAN run each year. It is used to determine SuperBorder rams for that selling season. The BLX Index has been developed for production systems using Border Leicester sires crossed to Merino dams to produce first cross progeny. BLX balances maintaining mature size with significant improvements in early growth and reproduction. A higher BLX index targets animals that are more profitable in this production system.

The cut off for the 2024 drop is 128.74. Everything on or over this index is a Superborder for the 2023 sale

Not all rams sold by SuperBorder members are necessarily SuperBorder quality, but are bred by committed, registered breeders striving for genetic gain. SuperBorder rams must be structurally sound and of good breed type.

The SuperBorders group is made up of a number of studs across 5 states who work together in meeting market requirements for objectively measured maternal genetics in the Australian Lamb Industry. SuperBorders members are industry leaders with longstanding involvement in research, trials and industry resource flocks.

First cross lambs sired by 100% SuperBorder rams may be sold as 'Bred from SuperBorders'. Special yellow pen cards and SuperBorders ear tags are available to identify these animals when sold in physical sales. Virtual yellow sale cards are also available for SuperBorders progeny sold on online sale platforms. Please speak with us if you would like either of these marketing materials.

Updates to the BLX Index

Number of Lambs Weaned (NLW) has been replaced by an improved ASBV called Weaning Rate (WR). This new ASBV has been included in the BLX index.

Sheep Genetics has released a new trait that measures reproductive performance called Weaning Rate (WR). WR combines the traits of Conception (CON), Litter Size (LS) and Ewe Rearing Ability (ERA) into a single ASBV for selection. From 2022 onwards WR has replaced the previous trait of Number of Lambs Weaned (NLW) and has been included in the BLX index.

As a result of the introduction and inclusion of WR in the BLX index there have been changes in the percentiles for the analysis. You may notice that the 50th percentile for the analysis has changed compared to last year.

This ram sale season it will be important to use the percentile band table to re-benchmark what the percentiles are to assist with ram purchasing decisions.

To access the current percentile bands table please use the QR code below of the left. For further information on Weaning Rate please use the QR code on the right and refer to page 4 of the Sheep Genetics 2022 Analysis Enhancement Documentation.

Access the current First-Cross Sire Percentile Band Table

80	113.18	0.42	7.14	9.19	0.56	-0.19	-0.61	3.88	0.01
90	108.53	0.48	6.05	7.95	0.3	-0.49	-0.88	1.96	-0.02

The percentile report above shows the range of trait figures from the top performing sheep of the breed to the bottom. The 50th percentile band is deemed as the average. You can use this report to check where each lot fits within the breed for particular traits.

Understanding the information in the Womboota Border Leicesters catalogue

The Australian Sheep Breeding Values (ASBVs) within the catalogue are based on the Lambplan maternal analysis from the 15th of August 2024.

Heading	Trait	Units	Details
ID	Animal Identification		Each animal is tagged from birth with an eid tag. Then an extra visual tag and colour coded family tags are added at lamb marking
S	Animal Identification		Indicates the animal is born a Single
T	Animal Identification		Indicates the animal is born a Twin
TR	Animal Identification		Indicates the animal is born a Triplet
Q	Animal Identification		Indicates the animal is born a Quadruplet
BWT	Birth weight	Kgs	Measures the genetic difference in liveweight at birth
PWT	Post weaning weight	Kgs	Genetic difference in liveweight at 9 months of age
AMWT	Adult weight	Kgs	of a sires progeny
MWWT	Maternal weaning weight	Kgs	Genetic difference in liveweight at 12 months of age
PEMD	Post weaning eye muscle depth	Mm	Genetic difference in a sires female progeny's ability to raise healthy live lambs
PFAT	Post weaning fat depth	Mm	Genetic difference in eye muscle depth at the loin at 9 months of age
YGFW	Yearling greasy fleece weight	Kgs	Genetic difference in fat depth at 9 months of age
WR	Weaning rate	Lambs per ewe joined	Genetic difference in total fleece weight at 12 months of age.
BLX	Border Leicester Crossing index		The genetic difference between female progeny of a sire for the number of lambs surviving at the time of weaning
			Calculated across a number of ASBVs to rank animals on the suitability for first cross ewe and wether production
Acc	Accuracies	Percentage	The yellow background in the BLX column indicates the animal is a Superborder
SB no	Superborder's number		Are a reflection on the amount and quality of information available to calculate the ASBVs for each animal.
Sire/Dam	Pedigree		Every animal eligible to be a superborder is allocated an extra tag. Each tag is a unique number for quality assurance within the Superborder's group
			These are unique numbers relating to searching animals within sheep genetics
			Please call if you need help searching for full pedigrees on any animal
			Indicates the animal is ranked within the top 5 % of the breed
			Indicates the animal is ranked within the top 10 % of the breed
			Indicates the animal is ranked within the top 20 % of the breed
